

This market will resolve to "Something" if any of the following conditions are met between market creation and April 30, 2026, 11:59 PM ET:

- Strait of Hormuz traffic returns to normal
- WTI Crude Oil (WTI) hits ↑ \$200
- Fed decides any change in April
- US military action against Cuba
- Anyone jailed over Epstein disclosures

Otherwise, this market will resolve to "Nothing".

1. Strait of Hormuz traffic returns to normal

This market will resolve to "Something" if IMF Portwatch publishes a 7-day moving average of transit calls ("Arrivals of Ships") for the Strait of Hormuz equal to or above 60 for any date during this market's above-specified time frame.

Daily transit calls include container, dry bulk, roll-on/roll-off, general cargo, and tanker ships. Ships not reported by IMF Portwatch will not be considered.

This market will resolve as soon as IMF Portwatch publishes a 7-day moving average of transit calls equal to or above the specified level, or once data has been published for the final date in the specified period and no such value has been published. If no data has been published for the final date of the specified period within 14 calendar days (ET) after the end of that period, this market will resolve based on data published up to that point.

Revisions to previously published data points made within this market's timeframe will be considered. However, they will not disqualify a previously published data point from qualifying. Revisions to previously published data points after data is published for April 30, 2026, however, will not be considered.

The resolution source for this market will be IMF Portwatch, specifically the transit calls data published for the Strait of Hormuz at <https://portwatch.imf.org/pages/cb5856222a5b4105adc6ee7e880a1730>, both in the chart and through downloadable files.

2. WTI Crude Oil (WTI) hits ↑ \$200

This market will resolve to "Something" if, at any point during this market's above-specified time frame, any 1-minute candle for the Active Month of WTI Crude Oil futures has a final "High" price equal to or above the listed price.

For WTI futures, the active month refers to the nearest listed contract month. The active month changes at 6:00:00 PM ET at the start of the trading session two business days prior to that contract's last trading day, at which point the next listed contract becomes the active month.

For WTI Crude Oil (CL) futures, the last trading day is defined as three business days prior to the 25th calendar day of the month preceding the contract's delivery month, consistent with CME contract specifications.

Only prices achieved during the applicable trading session for the underlying market will be considered. Under the standard schedule, trading is open from 6:00:00 PM ET Sunday through 5:00:00 PM ET Friday, with a daily break from 5:00:00 PM ET to 6:00:00 PM ET, except where modified by holiday or special-session hours as listed on Pyth.

Prices will be used exactly as published by Pyth, without rounding.

If the Active Month contract does not trade at all during the listed time frame, the listed price will not be considered to have been reached.

In the event of a contract specification change, feed change, or similar structural modification affecting the underlying market during the listed time frame, this market will resolve based on adjusted prices as displayed on Pyth.

The resolution source for this market is Pyth — specifically, the Active Month WTI Crude Oil futures "High" prices available at <https://pythdata.app/explore?search=WTI>, with the chart settings configured for 1-minute candles.

Historical 1-minute candles may be accessed by appending a Unix timestamp (seconds) to the Pyth chart URL using the "t=" parameter.

If the relevant Pyth data is unavailable due to a system outage, data failure, or other technical disruption that prevents verification of the required 1-minute candle data, the official daily high price published for the Active Month WTI Crude Oil (CL) futures contract by CME Group may be used to determine whether the listed price was reached during the applicable trading session.

### 3. Fed decides any change in April

The FED interest rates are defined in this market by the upper bound of the target federal funds range. The decisions on the target federal fund range are made by the Federal Open Market Committee (FOMC) meetings.

This market will resolve to "Something" if the upper bound of the target federal funds rate is changed by any amount of basis points versus the level it was prior to the Federal Reserve's April 2026 meeting.

The resolution source for this market is the FOMC's statement after its meeting scheduled for April 28-29, 2026 according to the official calendar:

<https://www.federalreserve.gov/monetarypolicy/fomccalendars.htm>.

The level and change of the target federal funds rate is also published at the official website of the Federal Reserve at <https://www.federalreserve.gov/monetarypolicy/openmarket.htm>.

This market may resolve as soon as the FOMC's statement for their April meeting with relevant data is issued.

### 4. US military action against Cuba

This market will resolve to "Something" if a US-initiated drone, missile, or air strike on the soil of Cuba is announced or credibly reported to have occurred during this market's above-specified time frame.

For the purposes of this market, a qualifying "strike" is defined as the use of aerial bombs, drones, or missiles (including FPV and ATGM strikes as well as cruise or ballistic missiles) launched by any United States operatives, including military forces, intelligence agencies, or other U.S. government operatives, that physically impact ground territory within the listed country.

A strike on any area within the terrestrial territory (including rivers, lakes, ports, but excluding territorial sea) of the listed country counts.

Missiles or drones that are intercepted and surface-to-air missile strikes will not qualify, regardless of whether they land on the specified territory or cause damage.

Actions such as artillery fire, small arms fire, ground incursions, naval shelling, or cyberattacks will not qualify.

Any strike occurring during this market's timeframe that is claimed by either Donald Trump or the U.S. government will qualify.

The primary resolution source will be a consensus of credible reporting.

This market will remain open until the end of the second day after the resolution time. If the date/time of a qualifying strike cannot be confirmed by a consensus of credible reporting by that time, it will not qualify, regardless of whether a strike was later confirmed to have taken place.

#### 5. Anyone jailed over Epstein disclosures

This market will resolve to "Something" if, during this market's above-specified time frame, any individual serves any time in a federal, state, or local U.S. jail or prison, and the cause of that incarceration is attributed to information contained in files related to Jeffrey Epstein released by the federal government on or after December 19, 2025.

A qualifying incarceration must be caused by information included in Epstein-related files released on or after December 19, 2025. The cause of incarceration may be established through official charging documents, court rulings, sentencing statements, or through a clear consensus of credible reporting attributing the incarceration to information contained in those released files. Incarceration driven by information that was publicly known before December 19, 2025, or by reasons unrelated to the content of the released Epstein-related files, will not qualify.

The resolution source for this market will be official court records or government statements, however a consensus of credible reporting may also be used.
